

Quinn Smiley
CIT 381
October 16th, 2025

1. What your database represents (you may have changed)

My database is collecting data about the users who visit my website and the results from taking the quiz.

2. How many tables you currently have

I currently have two tables.

3. Which relationships are one-to-many or many-to-many

The relationship is one-to-many because one user can have multiple results from attempting the quiz multiple times, but a quiz result can only have one user.

4. Any planned changes or questions for your instructor

Nope!
